

Fishers' knowledge and experience in Iceland's emerging Rock crab fishery

Rybicki, S., Oostdijk, M., Chambers, C.

2. Knowledge

- Development of harvesting methods
- Ecological and behavioral insights
- Inclusion in fishing regulations

3. Issues

- Greying and reduction of small-scale fleet
- Limited access to marine resources
- Competition for local species
- New diseases

4. Needs

- Diversify small-scale fishery
- New marine resource opportunities
- Scientific advice
- Processing and marketing opportunities
- How did other countries adapt?

5. Conclusion

- Fishers and coastal communities are important observers of change
- Fishers' knowledge is undervalued and not formally integrated in Iceland
- Possibility to change the local food culture
- Big interest in further developing fishery

If you can't beat it, eat it?

1. Workshop

1 small boat owner association

6 governmental bodies

8 fishers

2 processing industry

11 scientists
biologists
social
economists

1 boat manufacturer
